

Want to know INSTANTLY what your audience thinks?

If your customers are looking for an easy and fast way to get audience feedback and instant data collation then Reply Systems is the solution.

The Reply Systems Worldwide product range consists of a base station that connects to a presenter's computer together with collation software and audience feedback remotes. With this system, the presenter can ask questions, the audience responds using the remotes and the feedback is immediately available as a graphic for display.

Reply Systems will also give you a detailed and accurate log of responses to every question making it perfect for testing, voting and reporting purposes. Saving your customer time, collation errors and ultimately money.

Reply Systems are portable interactive audience response and electronic voting tools used in meeting, training, and research applications. Nearly 2 MILLION keypads are in use worldwide in applications that include:

- Collate board and shareholder voting sessions
- Track focus group research
- Log and record training and assessment requirement

Business Meetings, Focus Groups & Market Research, Sales Meetings, Education & Training

Reply Systems makes it easy:

- For the audience – Unique two-way feedback gives confirmation that your vote is received and recorded.
- For the presenter – Our Powercom software makes collation of the data simple and reliable and quickly converts them into charts.
- For the presenter – RF signals between the base station and audience remote makes set up quick and easy. RF is more accurate than wired or IR systems too.
- For the system manager – Reply Systems are scalable – you choose from 5 remotes to thousands.

How Reply Systems & Powercom Software can work for you:

Collate board and shareholder voting sessions

- Give everyone at your next voting session a Reply Systems remote and instantly track and collate the results of their voting.
- Every remote has a unique device serial number, teamed with PowerCom software gives an accurate recording of votes.
- Reply Systems remotes can be set up as one remote-one vote or weighted to represent the number of shares voting.

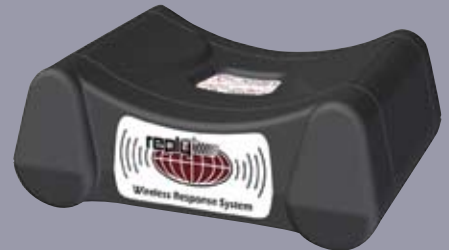

Track market research in focus groups

- For instant feedback, give your market research participants personal wireless keypads to respond to questions.
- Reply System keypads allow for up to 10 choices per question with numeric answers or A-E with the alpha format.
- Data collection is accelerated by rapidly surveying small and large groups alike, and then saves more time by automatically collecting and tabulating response data.

Log and record training and assessment requirements

- Encourages interaction with instructors, and understanding of the group's comprehension via feedback.
- Track individual's responses to questions for testing and assessment applications.
- Compare multiple training results on individual questions using side-by-side comparisons.

Reply Systems are available in multiple configurations to suit individual needs and requirements. For more detailed technical information see : www.herma.com.au/replysystems
